

DISCLAIMER: The voluntary carbon market disclosures below are made pursuant to California Assembly Bill (AB) 1305, Part 10 of Division 26 of the Health and Safety Code (passed 2023-10-07) as amended from time to time, also known as the Voluntary Carbon Market Disclosures Act (VCMDBA). The VCMDBA requires certain disclosures from business marketing and selling carbon offsets in California. These disclosures indicate BMO's relevant disclosures under Section 44475.

BMO is an intermediary and not the credit developer or project owner for the below described project. Therefore, BMO does not generate or manage the below provided data or information and cannot guarantee its accuracy. Rather, BMO relies on the relevant voluntary carbon registry and the data or information provided to that registry by the project owners, developers, and verifiers to comply with the VCMDBA disclosures.

The information provided below is current as of November 25th, 2024.

California's Voluntary Carbon Market Disclosures Business Regulation Act (AB 1305)(“VCMDBA”)

Project Name	COMMUNITY BASED AVOIDED DEFORESTATION PROJECT IN GUINEA-BISSAU - REDD
Registry	Verra Registry
Registry ID	2324
Registry Link	https://registry.verra.org/app/projectDetail/VCS/2324
Applicable Vintage	2013
Project Description	The objective of the project is to avoid deforestation of the forest areas situated within two National Parks in the Republic of Guinea Bissau (GB), thus reducing carbon emissions and contributing to the protection of these globally important biodiversity sites. Cacheu Mangrove Forest National Park is located in the administrative region of Cacheu, São Domingos and Cacheu sectors, encompasses 28.052 inhabitants in 23 villages/tabancas (INEC, 2007) and comprises a total area of 74,700 hectares. It was created with the objective of protecting the most relevant patches of mangrove in the northern part of GB, which are located around the Cacheu River estuary. The other predominant vegetation cover types in this region are open forest and palm groves. Cantanhez Forest National Park, with an area of 106,500 hectares, is located in the administrative region of Tombali, covering the Bedanda sector and encompasses 22.505 inhabitants in 111 villages/tabancas (INEC, 2007). Cantanhez forests represent the last remaining patches of primary sub-humid forest, which form part of a larger area that extends to the south, into neighboring Guinea Conakry. Terrestrial vegetation in the Cantanhez Park consists of patches of dense mature forest in a mosaic of patches of secondary forests, as the result of the cultivation and fallow stages of shifting agricultural practices. Mangroves cover a large proportion of the area of the park, particularly to the south and western regions, on the margins of the Cumbijã River.
Protocol	VM0007: REDD+ Methodology Framework
Project Location	Cacheu, San Domingos, Guinea-Bissau
Project Timeline (BMO interprets this as the full crediting period of the project)	31/03/2011 - 30/03/2031
Project Start Date	March 31, 2011

Emissions Reduction Dates & Quantities Issued	The Emission Reduction Dates & Quantities Issued can be found on the registry's site for this Project: [Project Description]
Project Type	REDD+
Emissions Type	Avoided emissions
Standards Met	Project vintage meets the standard of VM0007 as evidenced by registry listing and third party verification reports provided by Verra's site here [Verra Project Summary]
Durability	More information about durability can be found on Verra's website here: [Project Description]
Third Party Verifier	SCS Global Services
Volume of emissions removed or reduced annually	920,436 Tonnes [Verra Project Summary]
Reversal Measures	More information about reversal measures can be found on Verra's website here: [Project Description]
Source Data and calculation methods to reproduce / verify emissions reduction or removal credits issued	Refer to project documentation uploaded to the Registry. https://registry.verra.org/app/projectDetail/VCS/2324
